

# BIO ECONOMY IN THE WINERY SECTOR.

The EU is the first producer, consumer, exporter and importer of wine in the world. The winery industry generates by-products (spent grape pomace, pruning waste) that can be valorised into high-end products. They include products as fertilizers that could be used in the same industry, closing the loop.

## Example of a business model in the bioeconomy: CAVIRO

CAVIRO represents the union of over 50 wine-makers. They use the grapes from 12,000 grape growers.

Established in 1966

567 employees

Cooperatively owned

Largest winery in Italy

Leader in the production of alcohol in Italy

World co-leader in the production of natural tartaric acid

100% self-produced green electricity in all group sites
